

Heat Shrink Wrap™

Heat Shrink Wrap™ is specially formulated to be used on many covering and enclosure applications. Subjecting the film to heat begins a biaxial shrinking process (shrinking in all directions).

FEATURES, ATTRIBUTES AND BENEFITS:

- ★ Molds itself tightly to just about any surface
- ★ Stronger and lasts longer than traditional wrapping and enclosure methods, less damage from wind and elements
- ★ Creates Weather-tight containments
- ★ Wraps scaffolding, covers buildings, encloses bridges, ships and yachts
- ★ Standard industrial 9-12 mil versions contain FR and UVI additives
- ★ Passes NFPA 701-04 Test 1 Fire Retardant Standard
- ★ Lasts up to 2 years in fully exposed conditions
- ★ 12 mil withstands 900 PSF
- ★ Seams bond through heat, creating a seamless one-piece containment
- ★ Bright white film allows light into the area being contained or covered
- ★ Easy to repair if damaged

HEAT SHRINK WRAP™

- ★ Molds itself tightly to just about any surface
- ★ Stronger and lasts longer than traditional wrapping and enclosure methods, less damage from wind and elements
- ★ Creates Weather-tight containments
- ★ Wraps scaffolding, covers buildings, encloses bridges, ships and yachts
- ★ Available up to 40 ft. wide and up to 12 mil thick.

Americover® distributes shrink wrap accessories including:

Tape - Strapping - Heat Guns - Vents - Doors
Strap Tensioning Tool - Long Cuff Safety Gloves - Buckles - Film Cutting Knife

**Containment
Made
Easy**

Outperforms common C&A films, (visqueen). Once the film shrinks tightly around object, it will not flutter or buffet in the wind, reducing the chance of damage.

Additional Benefits:

- ★ Work can be performed during conditions that would otherwise shut down the job, allowing for an extended construction season
- ★ Jobsite safety is increased
- ★ Enclosed areas can be heated
- ★ Reduction of noise
- ★ Discourages theft and vandalism
- ★ Jobsite cleanup is easier and normally less expensive
