

Zip Wall®

Invented by a contractor, the ZipWall® System was the result of a long search for a way to put up a dust barrier quickly, without using tape, nails, or other materials that are slow and damaging to walls and ceilings.

FEATURES, ATTRIBUTES AND BENEFITS:

- ★ Install enclosures quickly, easily without the use of ladders
- ★ Keeps area outside of containment clean, free of dust and debris
- ★ No extra expenses in clean up
- ★ Plastic thickness up to 8 mils can be used with the Zip Wall® System
- ★ Also works with light canvas tarps or cotton fabrics

SLP (Spring Loaded Poles):

Non-Skid Plate holds the pole firmly in place at the ceiling without leaving any marks.

Head and Non-Skid Plate separate allowing the plastic sheeting to be sandwiched securely in-between.

Ball Joint swivels for use with vaulted ceilings and stairways.

Plunger, Collar and Spring, provide constant pressure between the floor and ceiling. Also allows the pole to be lifted so the plastic sheeting can be tucked underneath, making a tight barrier top to bottom.

Photo of containment is on the right...

Just imagine putting up this containment in 5 minutes using only 1 person.

Foam Rails: For a tight ceiling seal: Use the Foam Rail, a 5' bar with a soft, spongy edge that attaches to the top of the ZipWall® Pole and presses the plastic sheeting firmly against the ceiling.

Side Clamp: For a tight side-wall seal: Use the Side Clamp. This device attaches to the Foam Rail and presses the plastic sheeting firmly against the side wall.

Zip Wall® & Accessories

Zip Wall® Enclosure

Zip Wall® (ASFR6™), Counter Top Cover™, Sticky Mat™

Americover®

ZIP WALL®

Stocked in multiple locations.
