BOLD®

BLACKOUT LIGHT DEPRIVATION GREENHOUSE COVER

FREQUENTLY ASKED QUESTIONS:

What is “light dep” and how does it work?

Light deprivation, aka light dep, is the process of forcing plants to flower with sunlight in a time of year that is not normally the flowering period of the sun's natural lighting cycle by creating a 12 hour/12 hour lighting cycle. This allows growers to control the timing and number of harvests.

How much will I increase my number of harvests with light dep?

3 harvests per year are a real possibility. Growers also have more control of the timing of the harvests for optimal profit.

What type of material is BOLD?

100% polyethylene with string-reinforcement for tear resistance.

How long will it take to get my material?

Stock rolls ship out in 1-2 days plus transit time

Can I get a custom size?

Yes, custom sizes are available with 3-4 week lead time.

Size guidelines –

Widths - in 6.75' increments

Length - minimum 50' in 5' increments

What is the difference between breathable and BOLD?

Breathable covers tend to be much more expensive (2-5 times more in some cases). BOLD can be used on the outside of the greenhouse, breathable covers are meant to be used inside a greenhouse under a clear cover & are not designed to be stand up to the elements.

What is the difference between “Panda” and BOLD?

BOLD is an 8 mil string reinforced complete black out cover rated for 2-3 years with superior tear resistance. Panda is a 5 mil non reinforced partial black out cover rated for less than 1 year and tears easier.

How do I secure/attach the cover?

Most covers are attached to one side of the greenhouse and are held down with some type of ballast on the other side.

Do I need ventilation?

Some type of ventilation is recommended if the cover is on for a full 12 hours.

What's the best way to pull the cover and can it be used with an automated system?

BOLD covers are light enough to be pulled by hand or can be used with arm assisted or automated systems.

How well does BOLD hold up against strong winds?

BOLD is made with rip stop reinforcing string to prevent ripping in strong winds. Using some kind of ballast to aid in holding it down is always recommended.

Can BOLD go directly on my greenhouse frame?

Americover recommends the use of greenhouse felt tape on all areas where BOLD will come into contact with the greenhouse frame.

Can BOLD be sewn or welded?

Yes, it can be welded or sewn.

How is BOLD shipped?

Rolls over 125 lbs are shipped on a reinforced pallet, lighter rolls are boxed and shipped UPS.

How much is the shipping?

Shipping is based on a number of variables so call for quote
