

2022 Light Dep Harvest Calendar

Courtesy of Humboldt Light Dep, LLC

How To Use This Calendar

This calendar outlines how to schedule three light dep harvest per year. Each of the three separate runs have been color coded and assigned a day of the week. Perform the actions on the indicated days.

Definition of Key Terms

Light break: The process of turning on lights during the night cycle for an hour or more to prevent the plants from receiving 12 or more hours of uninterrupted darkness. This process prevents the plants from starting to flower.

Start covering light dep: Cover the plants with lightproof plastic on a daily basis so the plants receive 12 hours of uninterrupted darkness. This will induce flowering.

Take cuttings: Cut a small section of a vegging plant for cloning

Transplant clones to 1 gallon pots: Transfer rooted plant from smaller container to larger container with fresh medium.

Transplant clones to permanent location: Transplant 1 gallon pots into beds, or bigger pots or whatever your final container is going to be.

Stop covering light dep: This means you no longer have to cover your dep because nature is taking over due to the days getting shorter in the fall.

Flowering: Adjusting the light cycle to force flowering (usually 12 hours light, 12 hours dark)

Harvest: Chop 'em down & cure 'em up!

Note: This schedule was developed with the Pacific Northwest climate in mind. However, if you make adjustments by paying attention to your region this calendar can work for you.
