

LEAK DIVERTER DRAIN TARP

What are Leak Diverter Drain Tarps?

A Leak Diverter Drain Tarp redirects dripping water through a standard garden hose to a designated container, preventing costly damage to equipment and other areas. These temporary tarps are ideal for commercial spaces, healthcare facilities, warehouses, and construction sites. The tarp has built-in grommets for easy installation, fits NPT Thread 3/4" water hose, and can be fabricated to any size you need, starting at a minimum of 4' wide and 5' long.

Product Features:

- ▶ 6 mil or 14 mil fire retardant reinforced plastic sheeting
- ▶ Built-in grommets and hose connector
- ▶ Custom sizes and quick lead times

How does a Leak Diverter Drain Tarp Work?

The Leak Diverter Drain Tarp is placed beneath the leaking ceiling where it can catch the water, and allow it to drain through a hose into a nearby bucket. It's available in fire retardant and antistatic fire retardant versions which are compliant with building and fire safety codes making it a perfect solution for data centers, server rooms, and other areas with sensitive electronic equipment.

How do you install it?

- ▶ Thread the grommets, and attach it to the ceiling choosing one of many multiple mounting options, including bungee cords, drawstrings, hooks, or straps.

- ▶ Screw on any hose that fits NPT thread 3/4" and place the opposite end in a bucket to control where the water flows.
