

Waterproofing Solutions

Your Partner in Moisture Management.

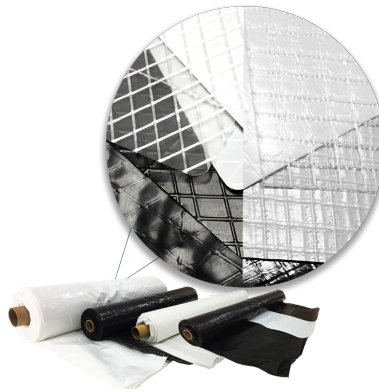

SPECIALTY PLASTIC SHEETING

HDPE

Thicknesses
20 Mil to 100 Mil

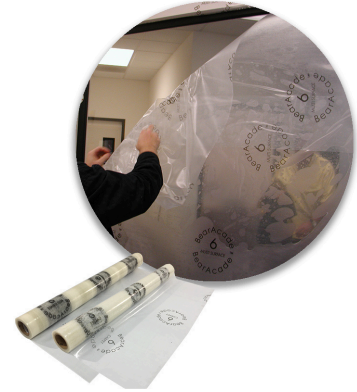

Applications
Under pavers, concrete slabs, green roofs, retaining walls

VAPOR BARRIERS

Thicknesses
6 Mil to 20 Mil

Applications
Under pavers, concrete slab, crawl spaces, basements, green roofs, foundations

BEARACADE

Thickness
6 Mil

Applications
Temporary overspray protection that adheres to most surfaces.

SPECIALTY TAPES

2-SIDED BUTYL TAPE

Measurements
Width x Length)
1.5" x 108'

Material & Finishing
Reinforced Butyl
Rubber

R25B SEAMING TAPE

Measurements
Width x Length)
4" x 100'

Material & Finishing
Single-sided synthetic
elastomeric adhesive

ENKA SOLUTIONS

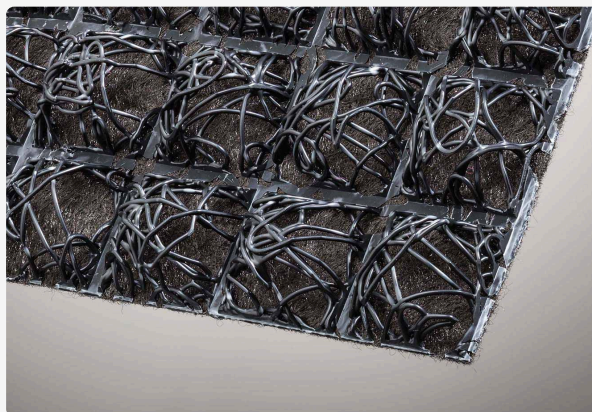

ENKA7010 & 7020 FOR METAL ROOFING

How It's Used

Placed under metal roof panels to provide ventilation and prevent moisture buildup.

Benefits:

- Reduces corrosion risk by allowing trapped moisture to escape.
- Prolongs the life of the metal roofing.

ENKA 3611 & 3811 FOR PLANTERS AND GREEN ROOFS

How It's Used

Installed beneath soil or planting medium to ensure proper drainage while maintaining structural waterproofing.

Benefits:

- Prevents waterlogging.
- Enhances plant health and protects the building from water damage.

FOR VERTICAL WALLS

How It's Used

Applied as a drainage layer on retaining walls or vertical facades.

Benefits:

- Prevents water from accumulating behind walls.
- Directs water to drainage systems, reducing hydrostatic pressure.

COMBINED USE IN WATERPROOFING SYSTEMS

- Crawl Spaces or Basements: A vapor barrier is installed to stop moisture, while a drainage mat like Enka products helps redirect water to sump pumps or drainage systems.
- Green Roofs or Planters: Enka mats provide efficient drainage, while HDPE or vapor barriers ensure the waterproof base layer remains intact.
- Vertical Applications: Vapor barriers block vapor, while Enka solutions handle water drainage behind facades or walls.
